	<b>Total Number of Plots With Existing Vegetation Type</b>	<b>487118</b>

The plots accounted for in this table were collected for LF National (LF 1.0.0). The plots were processed and archived in the standard LANDFIRE Reference Database (LFRDB) format. For more information on how plot data are processed refer to the Plot Data Processing document at: [http://www.landfire.gov/participate\\_plot.php](http://www.landfire.gov/participate_plot.php). The plots were available for evaluation and potential use in the LF National mapping effort. A public version of the LF National LANDFIRE Reference Database is available for download at: <http://www.landfire.gov/NationalProductDescriptions27.php>

Existing Vegetation Types (EVT) are primarily derived from [NatureServe's Ecological Systems classification](#), which is a nationally consistent set of mid-scale ecological units. The [NatureServe Explorer](#) provides descriptions for each ecological system including species, distribution and classification information. Additional units are derived from NLCD, [National Vegetation Classification Standard \(NVCS\) Alliances](#), and LANDFIRE specific types. For more information on the Existing Vegetation Type layer produced by LANDFIRE visit: <http://www.landfire.gov/NationalProductDescriptions21.php>
